

Create a promotional film poster that establishes futuristic technology such as cars and computers creating a dark scary scene on a different planet which technology is taking over, visual mood for an upcoming science fiction blockbuster. Crowded and futuristic. Creating irregular lines and dramatic directional lines. Have space between objects to show how it will be lonelier in the future. All the other objects seem heavy due to their weight in actual life.

Step 2- Studio Glossary

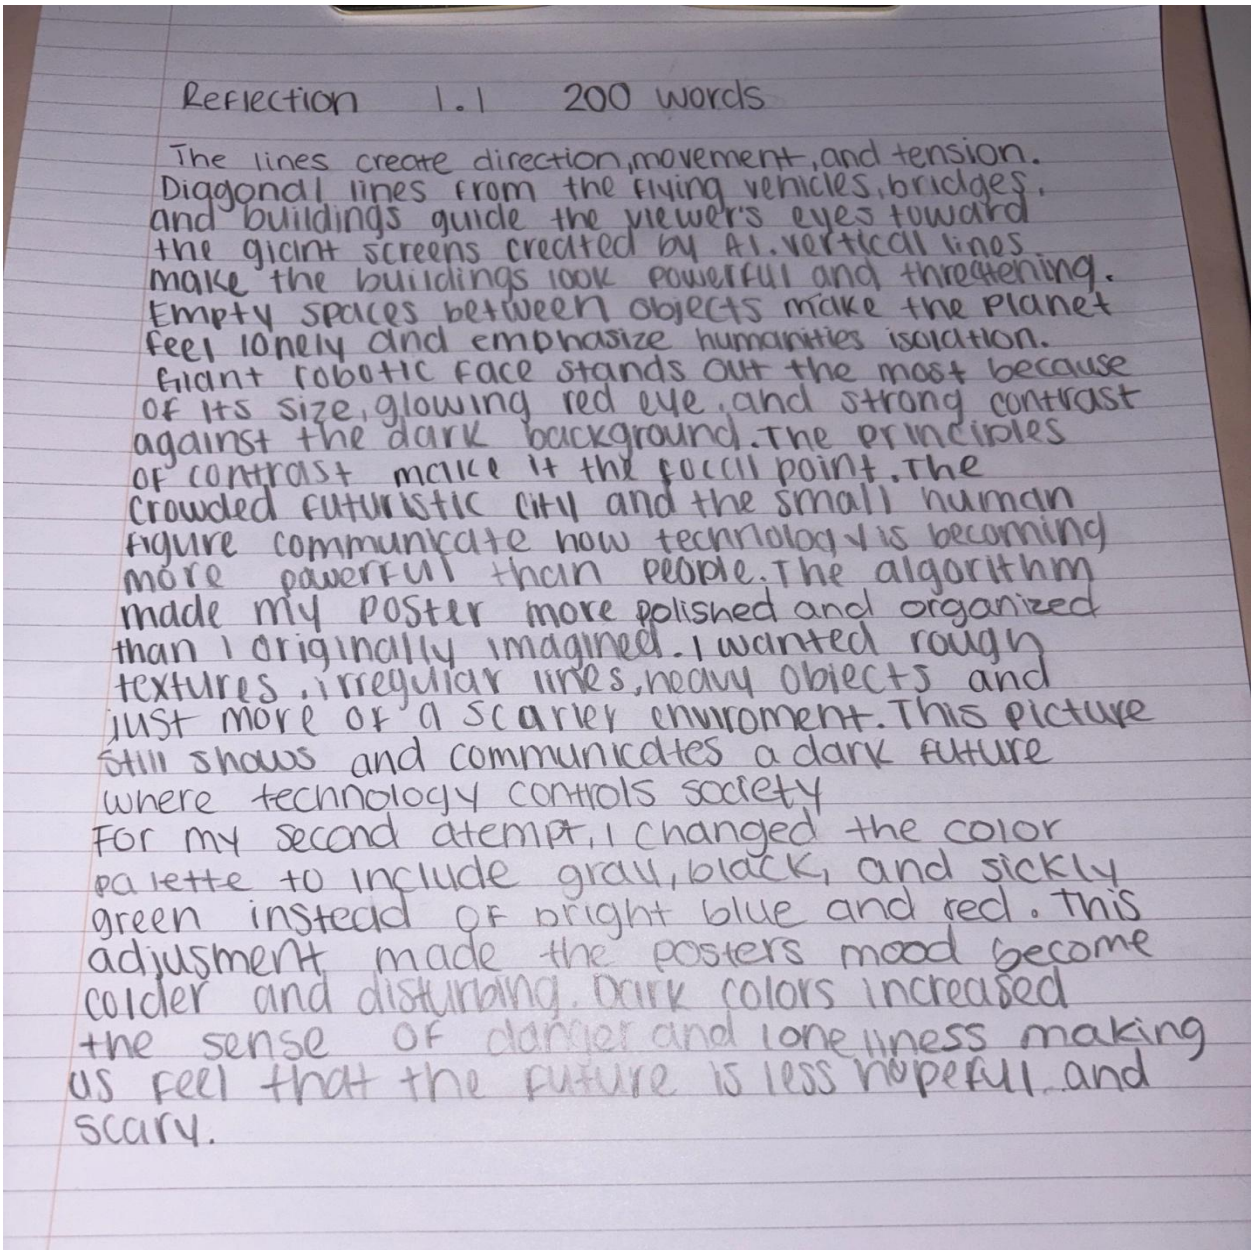

Lines- There are many different lines that you can use that can be used to portray different things. It is the most fundamental element artists can use. We have contour lines directional, irregular, and many more.

Shapes- A shape is a 2-dimensional area, but in art we have geometric and organic we used these to show unpredictable, irregular lines which these are organic, or you could do geometric to portray regular and precise

Texture- There are different types of texture terms but the one that stuck to me was subversive texture because it contradicts our tactile experience. This is used by artists to invite viewers to reconsider preconceptions.

Volume- This means how much space is being occupied in an object. Artists can use this to enclose a space with materials that are not completely solid; they create an open volume.

Contrast- This is used to create different viewpoints by drawing attention to regular or irregular lines as well as geometric and organic shapes.

Reflection 1.1 200 words

The lines create direction, movement, and tension. Diggonal lines from the flying vehicles, bridges, and buildings guide the viewer's eyes toward the giant screens created by AI. vertical lines make the buildings look powerful and threatening. Empty spaces between objects make the planet feel lonely and emphasize humanities isolation. Giant robotic face stands out the most because of its size, glowing red eye, and strong contrast against the dark background. The principles of contrast make it the focal point. The crowded futuristic city and the small human figure communicate how technology is becoming more powerful than people. The algorithm made my poster more polished and organized than I originally imagined. I wanted rough textures, irregular lines, heavy objects and just more of a scarier enviroment. This picture still shows and communicates a dark future where technology controls society
For my second atempt, I changed the color palette to include gray, black, and sickly green instead of bright blue and red. This adjusment made the posters mood become colder and disturbing. Dark colors increased the sense of danger and loneliness making us feel that the future is less hopeful and scary.
